

## The One Stop Sales Solution

In 1996 Gardners Books led the industry with its first version of EPoS (Electronic Point of Sale) software. This software turned a normal computer into a full cash register, offering the bookseller a level of sophistication never before seen at this price point.

The software has gradually evolved over the years, and become integrated with our Gardlink software. We have now released our latest version, which comprises of a complete from-the-ground-up re-write to offer once again a comprehensive retail solution whilst retaining a value for money philosophy, and making use of exciting new technologies.

It is often said that any software package is only as good as the backup support that you get with it. Gardners Books offers an accessible and comprehensive support service, manned by a team of dedicated technicians, who are available 6 days a week.
